

InVu®

Aesthetic Brackets

The difference is more than cosmetic®, The difference is InVu.

A Perfect Match for Any Patient

Meet the rising demand for aesthetic orthodontics and capitalize on a growing adult market with InVu Aesthetic Brackets. Their virtually flawless finish and small size makes them the most beautiful ceramic brackets you can find. InVu Aesthetic Brackets feature Personalized Color-Matching Technology. Brackets absorb wavelengths of light so only the natural tooth color shows.

Brackets represented with no color enhancement.

Strength and Beauty

InVu Aesthetic Brackets don't just look better. They are precision-engineered for superior strength, clean, easy bonding, lower friction, and an open design for ligation options. InVu reliability means your treatment will go smoothly and on schedule, exactly as planned. And while InVu is the most beautiful ceramic bracket available, it performs on a level equal to metal.

Save Time with Pre-Applied Adhesive

InVu Aesthetic Brackets are also available with Readi-Base®, featuring eXact® pre-applied adhesive for convenience and increased efficiency.

- Ready to place right out of the package
- Reduced risk of contamination
- Brackets set easily without sliding
- Minimal flash clean-up

Low Friction, Enhanced Patient Comfort

Low friction force and low profile make InVu comfortable to wear. Wedge-shaped lower anterior brackets minimize occlusal interference during treatment. Deep tie wings with rounded contours offer generous space for easy engagement of elastomers and make ligation easier. Ball-end cuspid hooks assure retention of elastics or elastomers and enhance patient comfort during treatment. Available in your choice of prescriptions – Roth or MBT.

InVu Friction Force Comparison

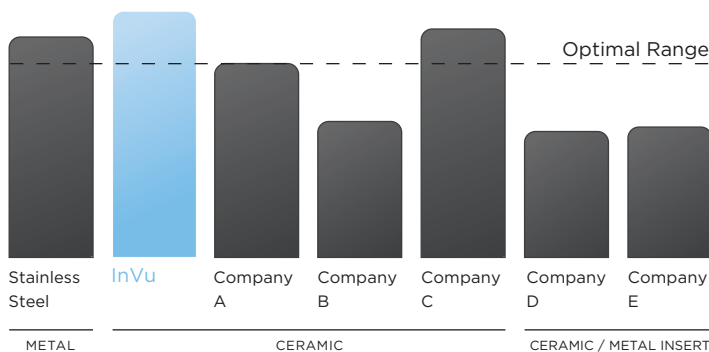

Unlike other ceramic brackets and those with metal inserts, InVu provides a lower level of friction with the same or better performance than metal brackets.

**Measured on upper lateral brackets.*

Quick, Clean Debonding

When it comes to bonding and debonding, nothing performs like InVu. That’s because InVu brackets feature an exclusive molded polymer mesh base that protects teeth by preventing direct contact between the ceramic and tooth enamel. The base is designed using symmetric replication technology, for a flexible, mesh surface that retains most of the adhesive during debonding. Unlike other ceramic brackets, InVu doesn’t require fracturing or special tools to debond.

Release Point Comparison

When compared to both stainless steel and competitors’ ceramic brackets, InVu brackets offer optimum bond strength.

Debonding InVu Brackets

InVu brackets debond quickly and easily. Using ligature cutters, simply squeeze the base mesio-distally as close to the enamel as possible. The flexible polymer mesh base releases easily from the tooth while retaining most of the adhesive.
