Complete Aligner System

Efficient Aligner Treatment from Start to Finish

The Refine Complete Aligner System from TPO® is the first aligner brand to incorporate a finishing appliance to address end-of-treatment challenges, such as posterior open bite commonly seen in aligner patients. Save time by using less trays – and finish your aligner cases to a higher standard.

With increased awareness of aligner treatment options, including “in-home” aligner delivery, more patients are demanding cost-effective options to quickly improve their smile. The Refine Complete Aligner System is designed to increase case acceptance, while providing you with a time-saving treatment option.

refine®
Complete Aligner System

Refine at-a-Glance

- Designed to correct minor to moderate anterior crowding or spacing
- Each case includes your choice of a custom or semi-custom finishing appliance
- No “add-on” lab fees; everything is included in the cost
- Each Refine aligner tray generates up to 0.5mm of movement
- No advanced training requirements
- Easy case submissions through TPRX™

Refine Treatment Options

Submitting and managing cases online is simple, and treatment options are designed for flexibility:

Refine Basic 5

Up to 5 Trays per Arch
(single or dual arch, including retainer)
Plus Refine Finishing Appliance

Refine Total 10

Up to 10 Trays per Arch
(single or dual arch, including retainer)
Plus Refine Finishing Appliance

Diagnostic Only

Allows you to view simulated results
and the number of trays required
before ordering aligners
Plus ability to “upgrade” to Basic 5 or Total 10

Finishing to a Higher Standard

Since the Refine Complete Aligner System includes a finishing appliance, you can efficiently move through final case refinement without an additional series of trays – while transitioning the patient to part-time wear. During the wearing period, the appliance corrects and relates teeth in both arches simultaneously.

The Refine Finishing Appliance utilizes the fundamental design of the original tooth positioner, providing the same proven¹ results. Specifically developed for aligner patients, the Refine Finishing Appliance is small and virtual results are available for viewing online before delivery.

- Promotes an ideal occlusion in as little as 3 weeks, even correcting posterior open bite frequently seen in aligner patients
- Corrects and relates teeth in both arches simultaneously
- The Refine Finishing Appliance can be used as an adjunct to any aligner system, allowing the patient to move to part-time wear – with no attachments
- The Refine Finishing Appliance can also be used to efficiently finish self-ligating and other bracket cases

Complete Aligner System

Move Patients to Part-Time Wear

Successful aligner patients are already compliant – moving to a part-time wear schedule with a removable finishing appliance is easy and convenient for them. Patients can also look forward to having any attachments removed.

Real Results – Without Additional Trays

Prescribing a Refine Finishing Appliance in place of an entire series of refinement trays will produce quality results in less time (and less appointments).

CASE 1

Start

After 3 weeks at night

CASE 2

Start

After 4 weeks

CASE 3

Start

After 8 weeks

Submitting Your Case

Ordering is easy; go to tportho.com/custom where you can select from several popular custom appliances, including the Refine Clear Aligner System. Fill out the auto-form for the appliance of your choice, and submit along with your scan (impressions or models are also accepted). Your case will be set up and uploaded to TPRX where you will have access to approve the case before fabrication.
